

Intelligent investments: this Verax's challenge

Economy is dynamics. In order to understand it, comparing its wobbles is not enough; one also needs to study them daily and wisely to take advantage of its drifts towards the best sustainable results.

Closely monitoring the market to be able to foresee investment tendencies is Verax Serviços Financeiros's work. Gathering technical know-how and high quality information, Verax is an asset manager focused on analysis, consolidation and investment management for legal entities and individuals.

Being an independent manager is its main advantage within a competitive world, in other words Verax doesn't own any products neither has sale targets. Its only goal is finding each client the right product. This does not only makes its services really tailored but allows each investor's needs to be recognized.

Verax constantly optimizes its work and pursuit for results by investing on modern operational tools. Moreover, being the investor experienced or not he'll find pro-activity professionalism and consistency in all actions, driven by an extremely qualified team, led by Marcelo Xandó and Pedro Lérias CFA - Chartered Financial Analyst, offering the investor a complete financial orientation, using high end techniques of asset placement and risk management, what makes Verax a market reference as one of the top investment companies in the country.

Amongst its corporative philosophy, we may find Verax's Vision aligned with its daily activity: "Being a market reference as the best investment group, acknowledged by its excellence and high performance".
